CASE STUDY | AI AUTOMATION

An AI front desk for plumbing and HVAC companies

It replies to customers in seconds, books jobs straight into the calendar, and alerts the on-call tech the moment there's an emergency. Day or night.

24/7 replies | Auto booking | Emergency alerts | Every lead saved

Demo build for Rapid Flow Plumbing & Heating, a sample company in Dallas, Texas

THE PROBLEM

Every message that goes unanswered is a job for the company down the street

Plumbers and HVAC techs spend the day under sinks and on rooftops. They can't stop to reply to every customer, and nights and weekends are exactly when the urgent jobs come in.

27%

Up to this share of calls to home service businesses go unanswered.

1st

Most customers hire the first company that gets back to them. Slow replies lose the job.

$250+

What a single HVAC service call is usually worth. Missing a few a week adds up fast.

Sources: Nextiva (2026), OpenCX HVAC guide (2026), UK and US home services response time studies

THE SOLUTION

One front desk with three helpers behind it

The customer only ever talks to one friendly assistant. Behind the scenes, it hands each task to a helper that does that one job well.

TALKS TO CUSTOMERS

Front desk

Chats by text, spots emergencies, collects the details one question at a time.

Booking helper

Checks the real calendar, offers open time windows, books, moves and cancels jobs.

Dispatch helper

Sends emergency and safety alerts to the on-call tech straight away.

Records helper

Saves every customer to a simple spreadsheet, booked or not, so no lead gets lost.

Works on website chat, SMS, WhatsApp and social media messages

HOW A BOOKING WORKS

From "my sink is clogged" to a booked job in under two minutes

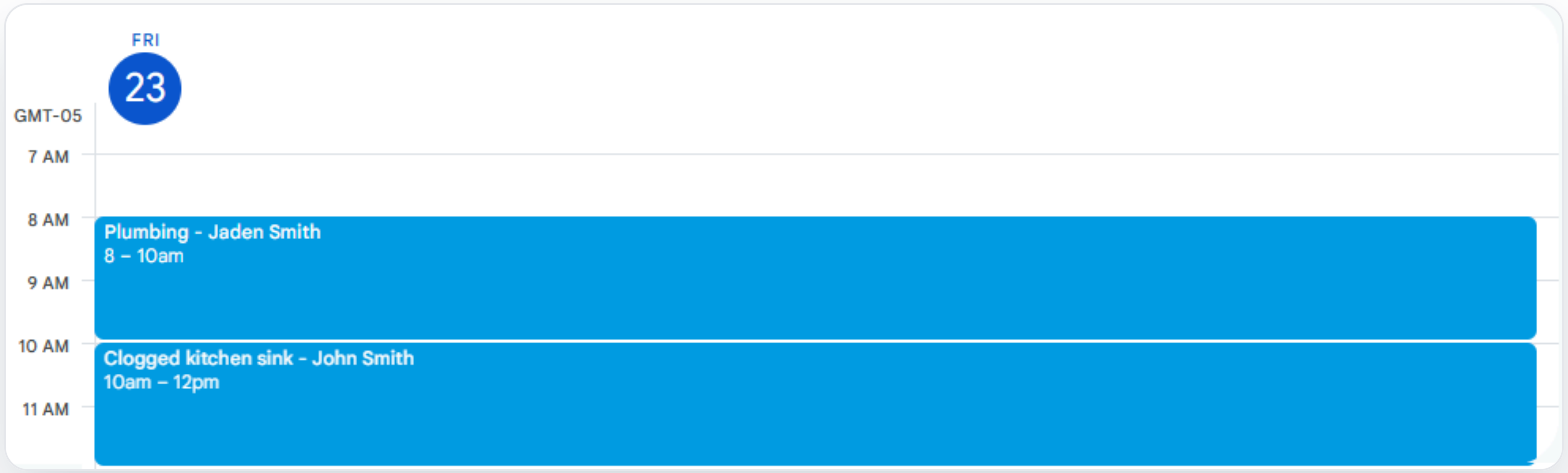

- **The customer texts** about their problem, any time of day.
- **The front desk asks** for name, phone and address, one simple question at a time.
- **It checks the real calendar** and offers open 2-hour windows.
- **It books the job,** confirms the details, and saves the lead.

From a real test conversation, shortened

STRAIGHT INTO THE CALENDAR

The owner just opens the calendar and sees the day's jobs

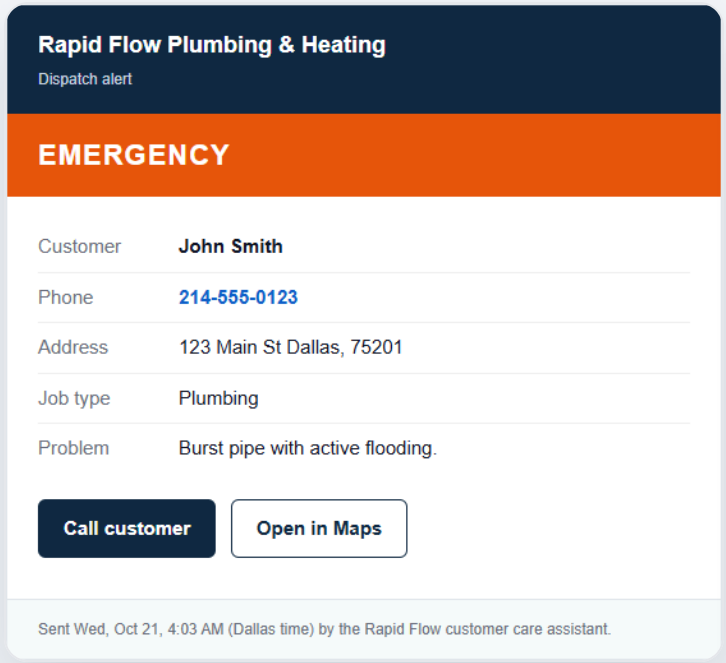

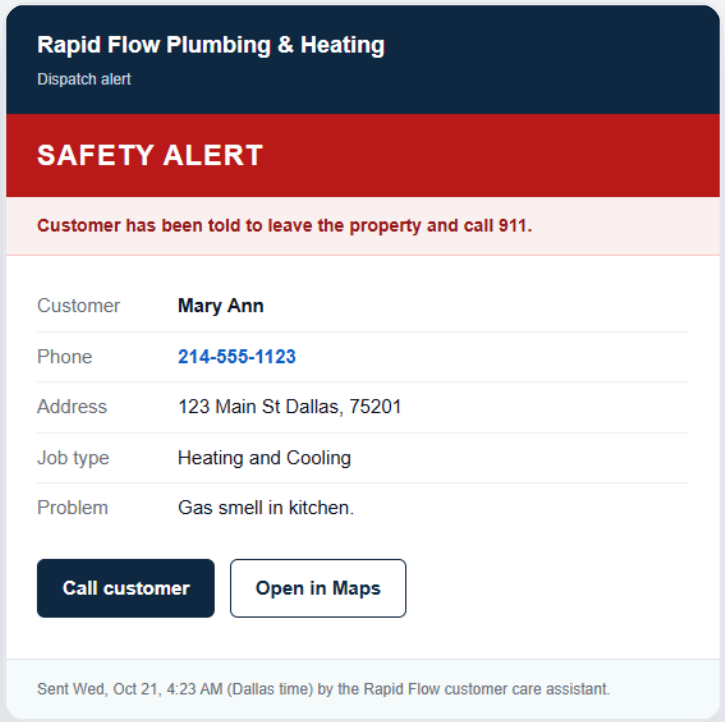

- Only books inside business hours
- Only books inside the service area, checked by zip code
- Customers can move or cancel by text
- Job details land in the calendar event for the tech

Calendar shown in Dallas time

EMERGENCIES

Burst pipe at midnight? The tech knows right away

- **Orange alert** for urgent jobs like flooding or no heat
- **Red alert** for gas smells or CO alarms. The customer is told to leave and call 911 first
- One tap to call, one tap for directions
- The AI never tries to fix a safety issue itself

EVERY LEAD SAVED

Nothing slips through the cracks

Every chat is saved to a simple spreadsheet, even when nothing gets booked. The owner can see who reached out, what they needed, and what happened.

Date	Name	Phone	Address	Zip	Job Type	Problem	Urgency	Owns or Rents	Preferred Time	Booking Status	Notes
2026-10-21 3:38	Jaden Smith	214-555-0123	123 Main St, Dal	75201	Plumbing	Clogged kitchen	Normal	Owns	Thursday Oct 22	Booked	No gate code or

Urgency is tagged as Normal, Emergency or Safety

Status shows Booked, Not booked or Emergency dispatched

Ready for follow-ups, reviews and reminders

UNDER THE HOOD

Built on tools a business already trusts

n8n automation | Google Gemini AI | Google Calendar | Gmail | Google Sheets

WHAT THE OWNER GETS

More booked jobs, less time on the phone

- **Instant replies,** 24 hours a day, 7 days a week
- **No more lost after-hours jobs** to slow callbacks
- **Emergencies reach the tech** the moment they come in
- **A clean calendar and lead list** with no data entry
- **Set up for your business:** your services, hours, prices and area

OPTIONAL ADD-ONS

Google review requests after each job

Spring and fall tune-up reminders

Text message alerts for techs

WhatsApp and website chat bubble
