AI AUTOMATION | CASE STUDY

Jadu

Personal Executive AI Assistant

An AI assistant that reads and replies to your email, manages your calendar and looks up your contacts, all from a simple chat on your phone. Nothing is sent or changed until you say yes.

- Read, reply to and send email
- Book and move meetings
- Look up contacts in your sheet
- You approve every action

BUILT WITH

n8n | Google Gemini AI | Gmail | Google Calendar | Google Sheets | Telegram

THE SOLUTION

Your inbox and calendar, from one chat

Business owners lose time to inbox triage, scheduling back-and-forth and hunting for contact details. Jadu takes that work off your plate: you message it in plain English, and it does the legwork.

Reads your email

Finds unread messages or searches by sender, date or keyword, then reads the full email.

Replies for you

Reads the whole message first, then writes a polite reply in your tone.

Sends new emails

Writes and sends an email to the person you name, with the subject and message you want.

Checks your calendar

Tells you what's on today, tomorrow or any date, and spots clashes before booking.

Books and moves meetings

Creates new events and reschedules existing ones to the time you ask for.

Looks up your contacts

Reads your Google Sheet to find phone numbers, emails and notes in seconds.

Works where you already are

A normal Telegram chat on your phone. No new app to learn, no dashboard to log in to.

Try asking Jadu

- What's on my calendar tomorrow?
- Reply to Ade: I'll call you Friday
- Move my 3pm meeting to 5pm
- What is Tunde's phone number?

HOW IT WORKS

Four simple steps, with you in charge

Jadu sits between you and your everyday tools. It reads real data, never guesses, and asks before it acts.

1 You send a message

Telegram

In Telegram, in plain English: "Move my call with Tunde to 6pm."

2 Jadu checks the facts

AI + Google tools

The AI looks at your real calendar, inbox or contact sheet. It never makes up information.

3 You approve

Human approval

For anything that creates, changes or sends, Jadu pauses and emails you Approve / Decline buttons.

4 Jadu does it and reports back

Done

The action runs and you get a clear report in the same chat.

JADU'S REPORT FORMAT

TASK
What you asked for

STATUS
Completed / Pending / Failed

ACTIONS TAKEN
Exactly which tools it used

RESULT
The answer or outcome

NEXT STEP
What happens next, if anything

Every reply follows the same clear layout, like a report from a good personal assistant.

Tone is adjustable: formal, friendly or witty, to match your brand voice.

Why it fits a busy business

No new tools

Uses the Gmail, Calendar and Sheets accounts you already have.

Approval built in

Nothing goes out or changes without your one-tap yes.

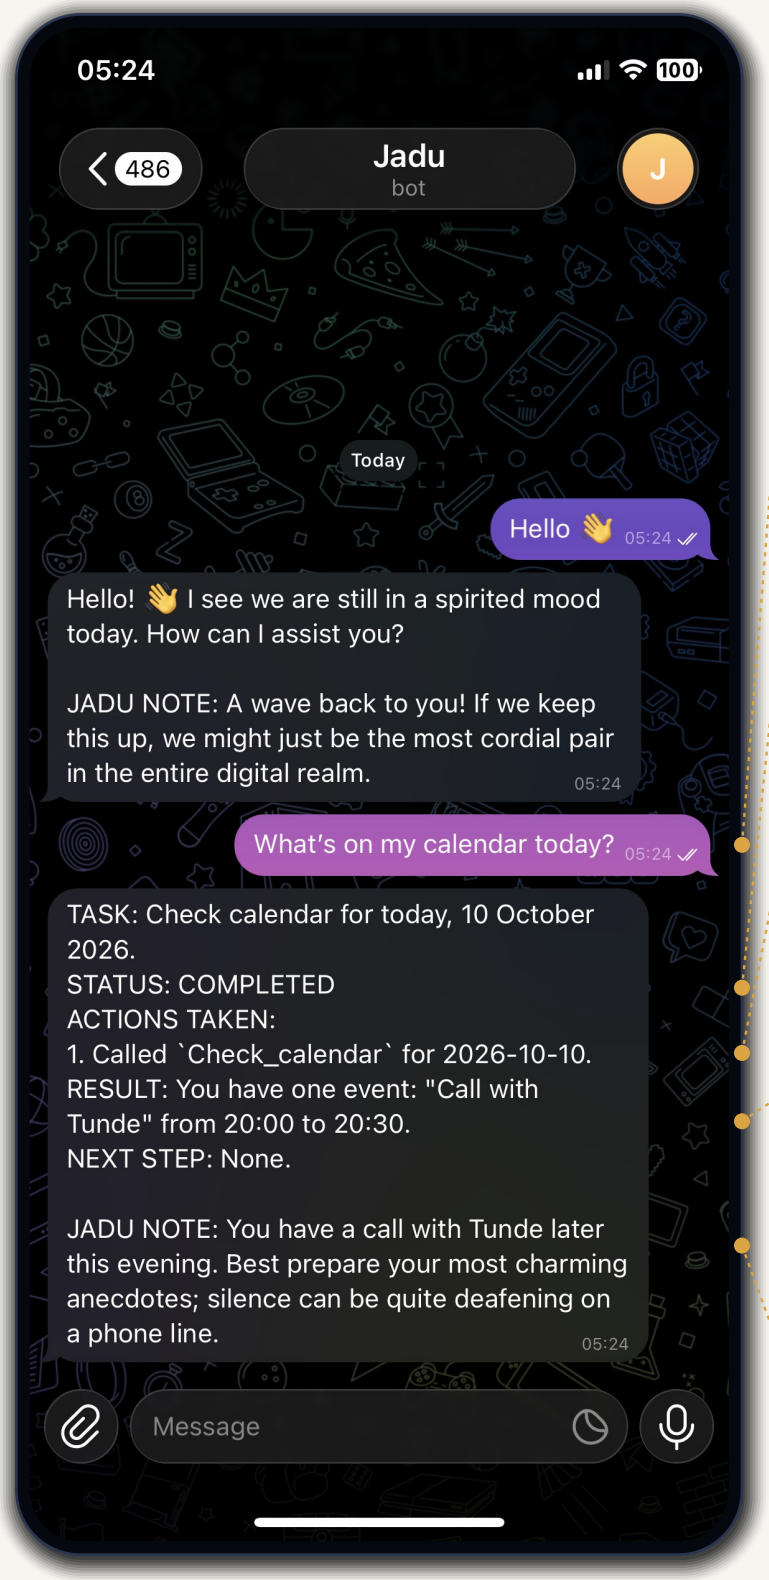

Fully customisable

Tone, rules and connected tools are shaped around your business.

SEE IT IN ACTION

Ask in plain English, get a clear answer

A real conversation with Jadu on Telegram: a live calendar lookup, answered in seconds.

1 You ask naturally

No commands or menus. Just type what you need, like texting an assistant.

2 Clear status

Jadu restates the task and reports whether it was completed.

3 Real lookup, not a guess

It shows which tool it used: here, a live check of the Google Calendar.

4 The answer

One event found: Call with Tunde, 20:00 to 20:30.

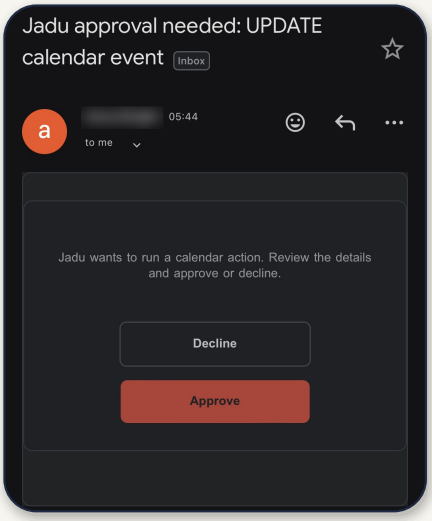

5 Your assistant, your voice

A friendly personality that can be switched to fully professional.

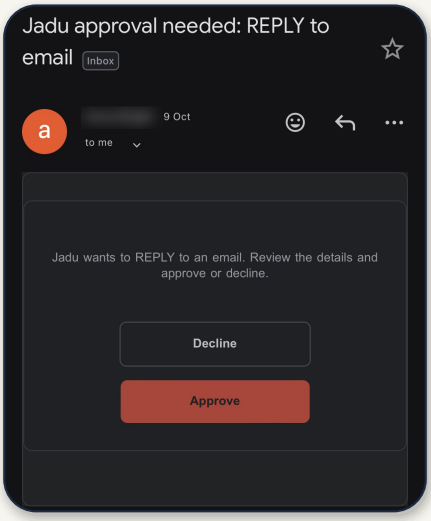

BUILT-IN SAFETY

You stay in control of every action

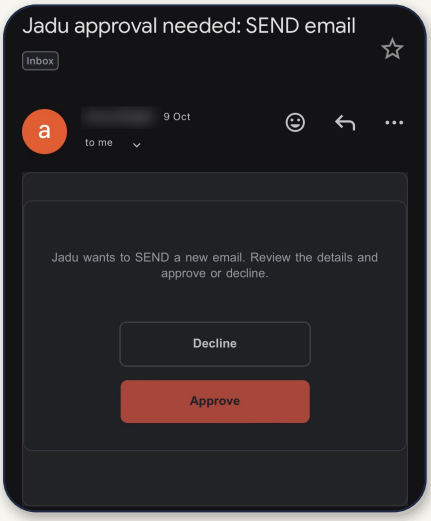

Jadu never changes anything on its own. Whenever it wants to create an event, move a meeting, reply to someone or send an email, it pauses and asks you first.

Reschedule a meeting

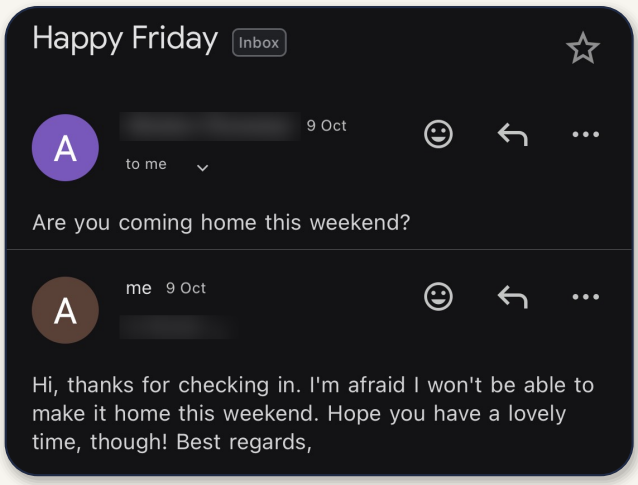

Reply to an email

Send a new email

One-tap approval email: Approve or Decline

After approval: the reply, delivered

Safe by design

- Nothing is created, changed or sent without your approval.
- Decline, and Jadu stops. Nothing happens.
- Only the owner's own Telegram account can talk to it.
- Your spreadsheet access is read-only.
- Jadu cannot delete anything.

Most AI tools act first and apologise later.

Jadu asks first.

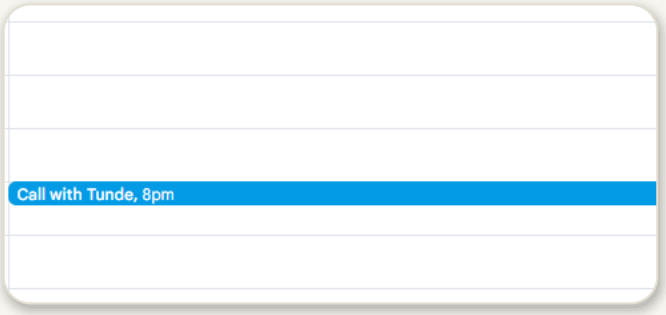

You get the speed of automation with the control of doing it yourself.

REAL EXAMPLE

Rescheduling a meeting, start to finish

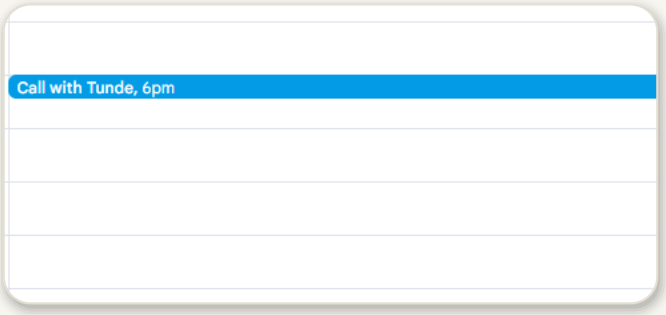

Asked on Telegram: "Move my call with Tunde to 6 PM." Here is exactly what happened.

BEFORE

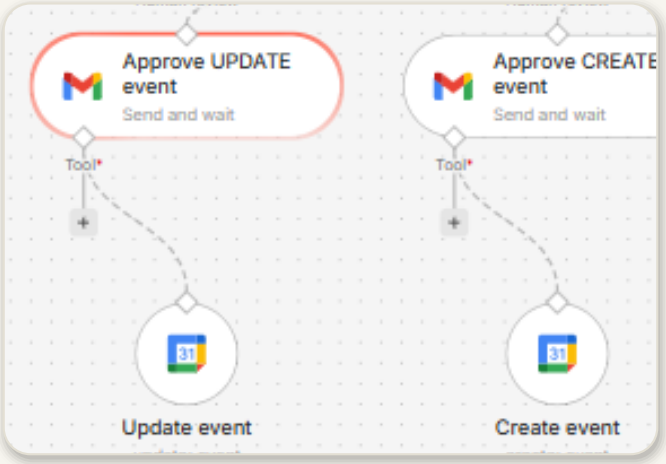

Google Calendar: 8 PM

AFTER

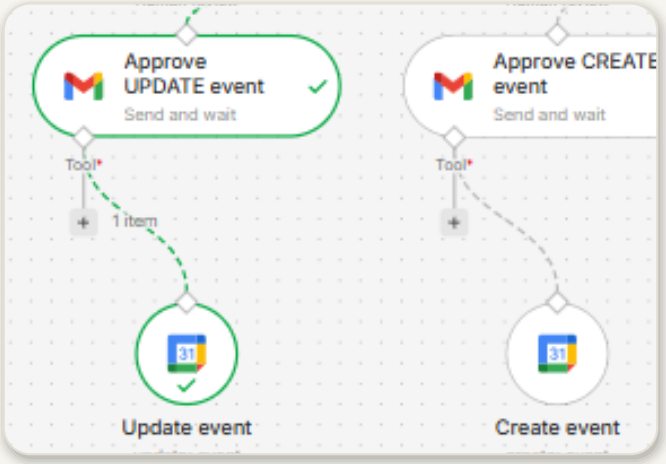

Google Calendar: 6 PM

1 Jadu pauses and asks you

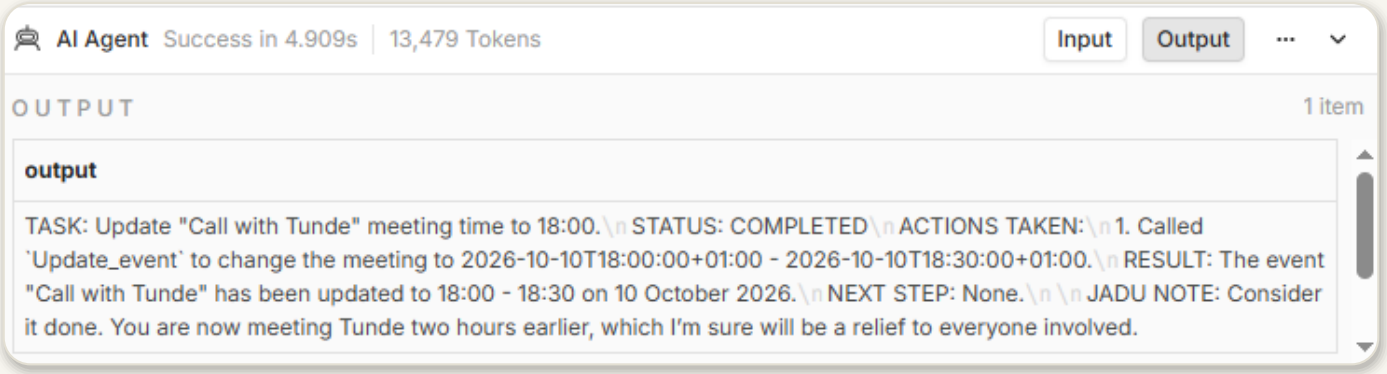

Waiting for you

2 You approve, and it runs

Approved and done

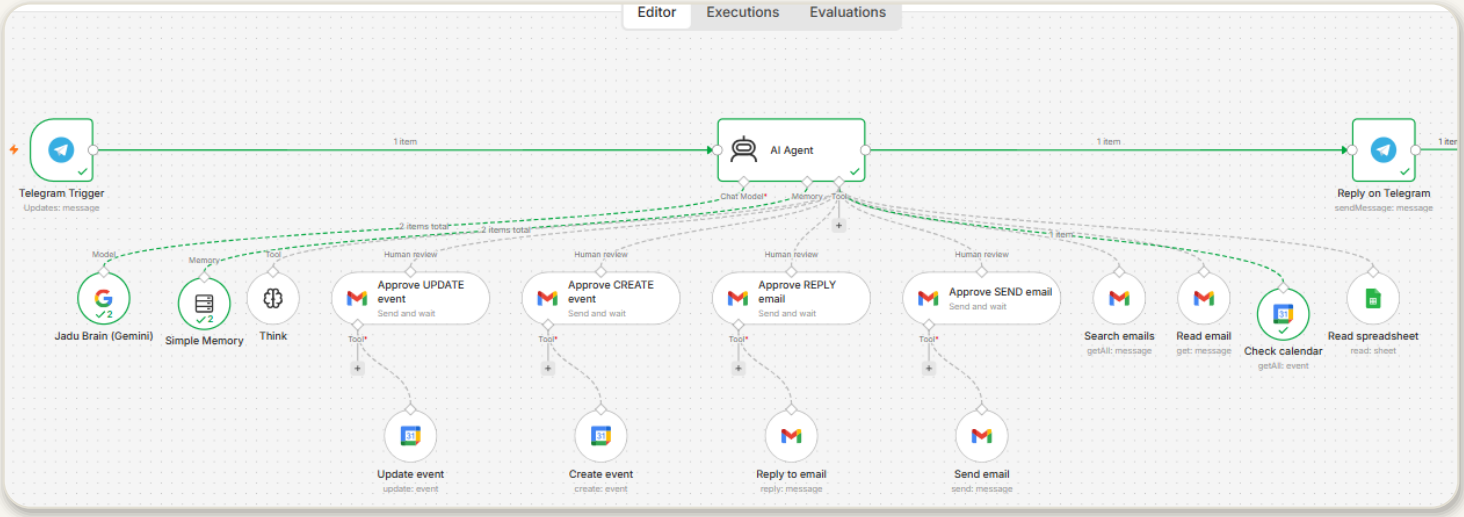

3 Jadu reports back in the chat

UNDER THE HOOD

The workflow behind the assistant

Built in n8n: Telegram feeds an AI agent, which can use eight connected tools. Every action that writes data passes through a human-approval step first.

Telegram in / out | AI brain + memory | Human approval gates | Gmail, Calendar, Sheets

Tech stack

- **n8n**
  Workflow automation engine
- **Google Gemini**
  The AI model that understands requests
- **Telegram Bot**
  The chat interface on your phone
- **Gmail API**
  Read, reply and send email
- **Google Calendar API**
  Check, create and update events
- **Google Sheets API**
  Read contact data

Reliability features

- Human approval on create, update, reply and send
- Fixed report format on every answer
- Says "no data found" instead of guessing
- Dates and times handled in your timezone
- Remembers the recent conversation
- Locked to the owner's Telegram account

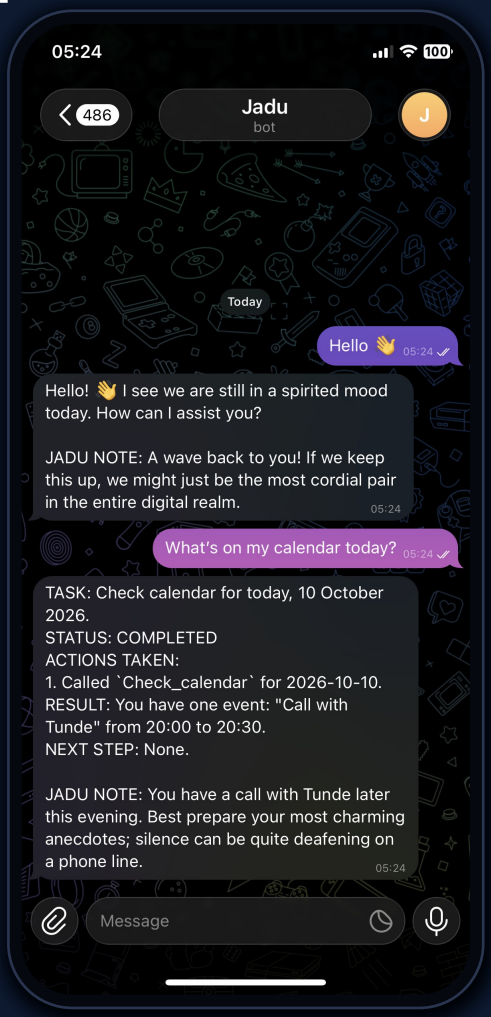

Easy to extend

n8n connects to hundreds of apps, so new tools can be added without rebuilding.

LET'S WORK TOGETHER

Let's build an assistant for your business

Jadu is one example. The same approach can be shaped around your inbox, your calendar and the way your team works.

How a project works

1 Discovery
We map your inbox, calendar and tools, and agree what the assistant should (and should not) do.

2 Build and test
I build it around your workflow and test it on realistic scenarios before you rely on it.

3 Handover
A clear walkthrough, so you know exactly how to use it from day one.

Ready to save time every day?

Message me on Fiverr or Upwork
and tell me what you would like to automate.

What I can connect

Gmail | Google Calendar | Google Sheets | Telegram

Other tools and chat apps can often be connected too. I will confirm what is possible during discovery.
